***Allowable Subject Matter***

Claims 1-15 and 17-28 are allowed.

The following is Examiner's reasons for allowance: The closest prior art is US Patent 3,404,061 which teaches a laminated graphite sheet in which the sheet of material may be impregnated with various amounts of polymeric material such as an epoxy resin wherein the graphite material may be compressed at elevated temperature; however, the reference does not teach or suggest pressure curing resin-impregnated flexible graphite sheets in which after being cured under elevated pressure the laminated graphite sheet provides high in-plane thermal conductivities and reduced weight.
